

Assignment - Shutter Speed - Panning

In this photo shoot you will use the panning technique to freeze the motion of a moving object. Take your photos in shutter priority mode and use a longer shutter speed *1/15sec or 1/30sec*.

What is panning?

Panning is as a technique that gives the shot a feeling of movement and speed. It's particularly useful in capturing any fast moving subject whether it be a racing car, running pet, cyclist etc. You pan your camera along in time with the moving subject and end up getting a relatively sharp subject but a blurred background.

What to do:

- Practice panning first
- Create a Google Slideshow and title it "Panning". Upload your 5 best photos and include the shutter speed of each photo.
